

Home Safety Assessment and Modification Resources San Francisco Bay Area

Assessing your home and making minor modifications are important steps towards reducing the risk of falling and maintaining one's independence. A **Home Assessment** will identify hazards and solutions, and is ideally performed by an Occupational Therapist or safety professional. **Home Modifications** include the installation of safety devices and the removal of hazards, both of which can make a big difference. Services from which you may benefit include the installation of grab bars, stair railings, walker steps, wheel chair ramps, commode rails and non-slip surfaces, removal of clutter and enhancement of lighting.

The organizations below are experienced in performing home safety assessments and modifications. In addition to the resources listed below, many cities have grants and low-interest loans available to assist homeowners with repairs and modifications. Contact your city of residence directly for more information.
